

# Material for MkDocs (Template)

---

Release Notes

## V0.0.1-B2024042600 // Configuration File

---

There are now 2 configuration files `mkbase.yml` and `mkdocs.yml`. The objective is to consolidate all general settings in `mkbase.yml` (theme settings, used plugins and extensions, additional CSS and JavaScript) and to have the site-specific settings in `mkdocs.yml` (logo, favicon, site\_name, site\_url, site\_author, navigation, etc.). It is also important to note that the file `mkdocs.yml` inherits the file `mkbase.yml`. Accordingly, the sole file that the user is required to manage is the `mkdocs.yml` file.
